WELL WATER TESTING APPLICATION

Testing of well water provides valuable information regarding the quality of the water. The two most frequently requested tests are bacteriological and chemical. Bacteriological testing is done to determine if well water is contaminated with potentially harmful coliform bacteria. Chemical testing tests for over twenty (20) inorganic chemical contaminants such as arsenic, lead, iron, nitrates, pH, hardness, etc. (Please note, well water testing is included with new well permits.)

1. Applicant Information:

Applicant Name: _____ Phone: _____
Address: _____ Email: _____

Owner Name: _____ Phone: _____
Address: _____ Email: _____

2. Property address / directions / special instructions: _____

3. Water Testing:

- a. Water Quality Concerns, if any (smell, color, taste): _____
- b. Samples requested: Bacteriological (\$70) ☐
Chemical (inorganic-\$150) ☐
Pesticide (\$150) ☐
Nitrate/Nitrite (\$100) ☐
Full Panel (Bacteria, Chemical, Nitrate-\$150) ☐
Petroleum (\$150) ☐
Other _____

***Our department will attempt to gather a sample within 1 week of receiving a completed application. All samples are sent to the North Carolina Public Health Laboratory for analysis. Bacterial sample results are generally available 1 week after collection. All other sample results may take 3 to 4 weeks. For potentially faster sample collection/results times, go to <https://slph.ncpublichealth.com> for a list of certified private labs.

I certify that the information provided above is complete and correct to the best of my knowledge. Submittal of this application grants right of entry to the Person County Environmental Health Department staff.
