

NC Beaver Management Assistance Program

OBTAINING SERVICES

Paul Stevenson CC BY 2.0

Since beavers were successfully reintroduced to North Carolina in 1939, this native species has thrived, benefitting wildlife and people by creating wetland habitat, reducing erosion, and improving water quality across the state. Damages caused by beaver activity, however, can be substantial and costly. The Beaver Management Assistance Program (BMAP) aims to help manage beaver-related problems on private and public lands. Because of practical and ecological considerations, the program is not designed to eradicate beaver populations; rather its aim is to assist the NC Department of Transportation, local governments, and private landholders in addressing specific beaver damage issues.

BMAP specialists work to educate customers about a variety of beaver management strategies, such as exclusion, pond levelers, and other nonlethal techniques. When deemed necessary, they will remove beaver and/or dams using humane and environmentally acceptable techniques.

In 2019-2020, BMAP services prevented the impending loss or repair costs of an estimated \$8.95 million in roads, bridges, timber and other agricultural resources, railroad trestles, dams, sewer systems, water treatment facilities, landscape plantings, homes, airport runways, and golf courses throughout North Carolina. Comparing the costs of BMAP to its savings, for every \$1.00 spent, \$5.82 in resources were saved.

County Cost-Share

Person County is participating in the program this fiscal year by contributing a \$6,000 participation fee, which grants residents access to services provided by the NC Wildlife Resources Commission.

Service Priorities

Requests for assistance are handled on a first-come, first-served basis. However, projects that address threats to public health and safety receive top priority.
